

Non-stick and lubrication coatings for faster production processes ...

... as well as extension of cleaning intervals and improvement of product quality in industry

Dirt or wear on systems need to be recognized immediately, to avoid contamination of the product that comes in contact with the system. To complement our very successfully used non-stick surfaces, we have therefore developed two lightcoloured surfaces so that cost-intensive machine downtimes due to long and intensive cleaning can be avoided, and production processes can be accelerated and extended.

GU 1125 white

- is a PTFE-based non-stick surface
- has excellent non-stick and sliding properties
- is very temperature-stable
- suitable for CIP cleaning
- meets all requirements of the FDA-Regulation 10/2011 and is EU compliant

GU 1117 creamy white

- is a PFA-based non-stick surface
- has excellent non-stick and sliding properties
- is very temperature-stable
- is suitable for CIP cleaning -
- is more chemically resistant than PTFE
- is abrasively very stable
- meets all requirements of the FDA-Regulation 10/2011 and is EU compliant
